## Welcome

VoxSpell is a Spelling Aid targeted at an audience of younger children aged 8-12. As such, it is a colourful, bright application and is desired to be a fun, new way of learning how to spell! With four exciting game modes and a level-based progression system, you'll always be wanting more!

## Startup

If this is your first time opening VoxSpell, you'll be encountered with the screen below. This is the startup screen and is where you select the initial levels to unlock. Select a level from the drop down menu and click "select" when you're comfortable with unlocking the selected level. Whichever level you decide to choose will unlock that level and any levels lower than that. Level 1 is the minimum and level 11 is the maximum. If you click "select" without choosing a level, it will default to level 1.

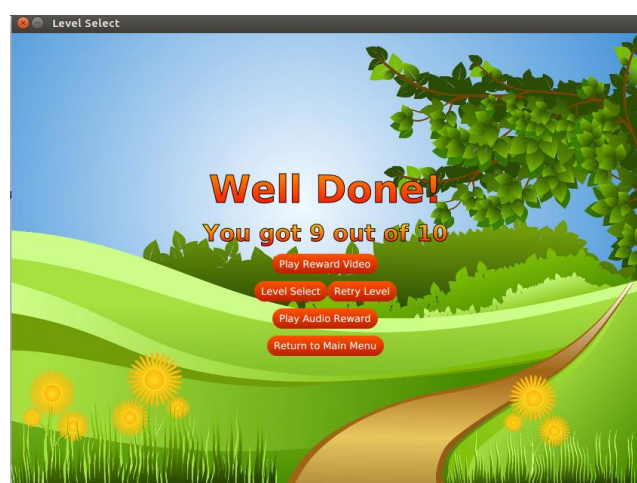

# Main Menu

The Main Menu of VoxSpell is where you can access one of the four game modes, the high scores and statistics and the settings menu. Hovering over any of the six buttons highlights the button and gives a description for the selected option in the white box on the bottom of the screen.

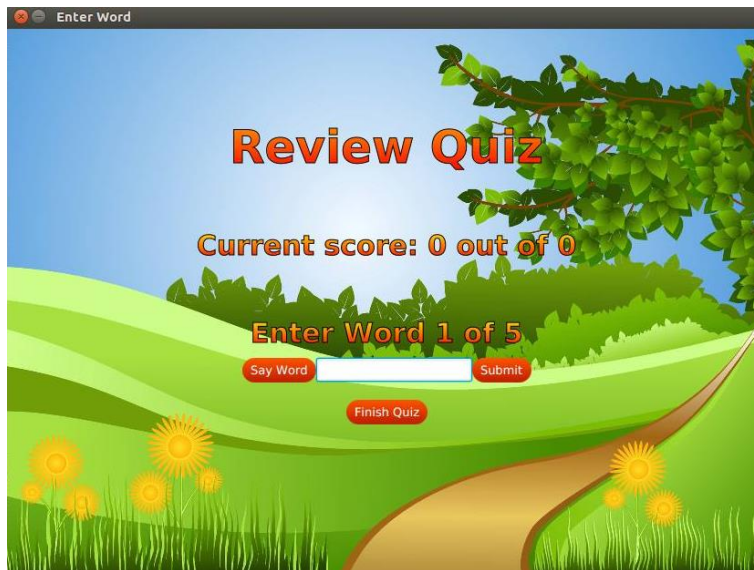

# Standard Quiz

The main quiz of VoxSpell! The only place where you can unlock levels. Select from one of the unlocked levels and start a quiz! To unlock the next level, you must score 9 out of 10 on the current hardest level (the highest unlocked level).

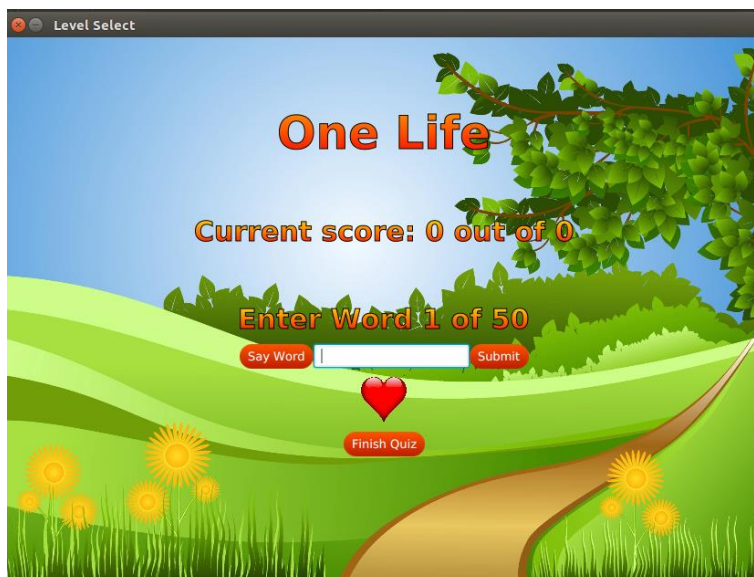

# Review Quiz

The quiz you need to master the tricky words! Select a level once again and take a quiz on words you've previously spelt incorrectly. If you haven't spelt any words incorrectly for a level, VoxSpell will tell you and you won't be able to select that level for a Review Quiz.

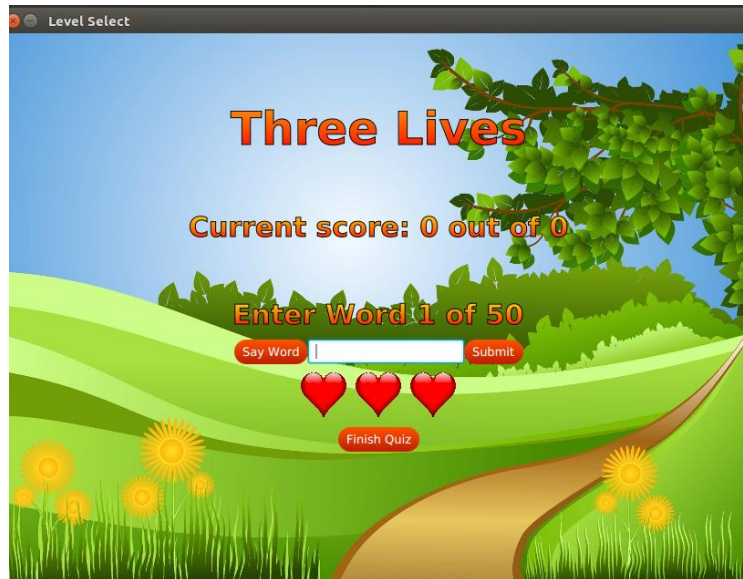

# One Life

You have one life, make it count! Select a level to start a one life quiz, where you have one life to get as far as you can. If you spell a word incorrectly, you lose your one life and the quiz ends with your current score of correctly spelt words.

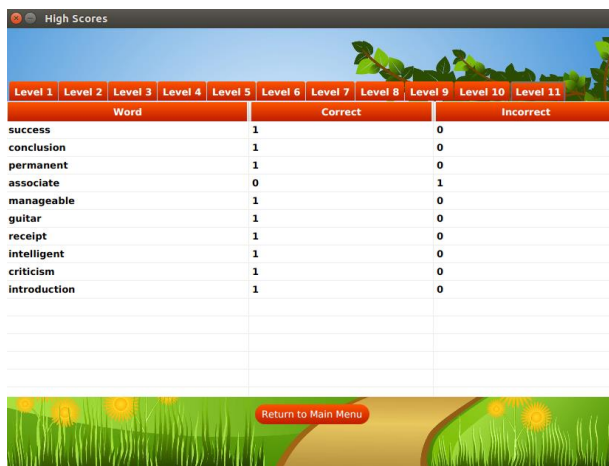

# Three Lives

You have three lives, yay! Select a level to start a three lives quiz, where you have three lives to get as far as you can. If you spell a word incorrectly, you lose a life. The quiz ends once you reach zero lives and your score is the total correctly spelt words you made.

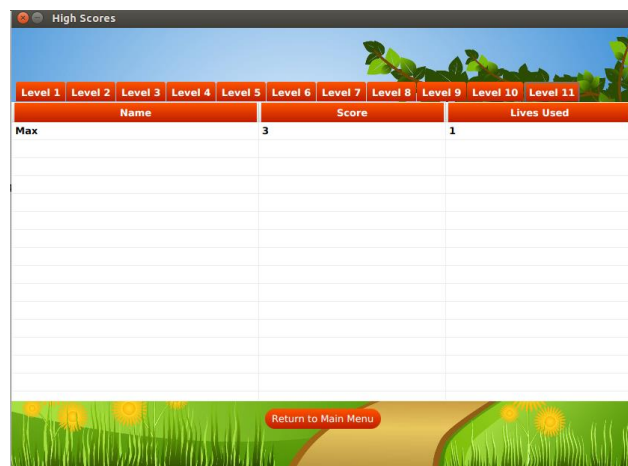

## Scores and Stats

View high scores and statistics for each game mode separately. Choose a game mode to view statistics for. Standard Quiz and Review Quiz statistics are the same and will display the pass/fail rate for each word that has been tested, split up into levels by tabs. One Life and Three Lives correspond to their respective high scores, split into each level and organized by the name submitted alongside the score.

Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7	Level 8	Level 9	Level 10	Level 11
Word	Correct			Incorrect						
success	1				0					
conclusion	1				0					
permanent	1				0					
associate	0				1					
manageable	1				0					
guitar	1				0					
receipt	1				0					
intelligent	1				0					
criticism	1				0					
introduction	1				0					

Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7	Level 8	Level 9	Level 10	Level 11
Name	Score			Lives Used						
Max				3					1	

# Settings

Configure the application settings. This includes the ability to change the speaking voice from the default USA voice to a NZ voice, the ability to add and select custom spelling lists and the option to reset all data for the application. If the speaking voice is changed, VoxSpell will remember even if the application is closed. If data is reset, stats, scores and levels unlocked will be reset and the application will start again from the initial level select screen. To add a new word list that works, it must be of the same format as the NZCER-spelling-lists.txt with 11 levels separated by % signs. Click “Add New Wordlist”, navigate to the list in your directory, and then highlight it in the list of custom lists and click use selected wordlist to select it.

## Thank You
